

Challenges of Lifeboat Design

The RNLI provide what for many in the Marine industry is the 4th emergency service. They are a completely charitable organisation with an ever expanding fleet of vessels around the country.

The design of a lifeboat is in many ways a unique vessel exposed to all of the worst weather conditions we can imagine. Some of the design features of a lifeboat are ones which many others can only dream of.

Join the RINA/IMarEST Young Members Network for a talk presented by Holly Philips, Principal Naval Architect RNLI on the challenges of Lifeboat design.

**Date: Tuesday 28th February 2012
Time; 1900 hrs**

**Venue: Room 210, Roland Levinsky Building,
University Plymouth**
